

Page 1 — Calibration & Diameter Check

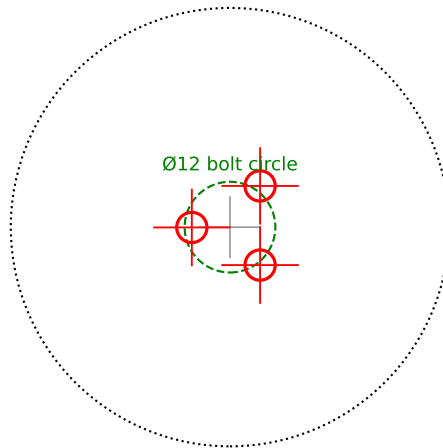

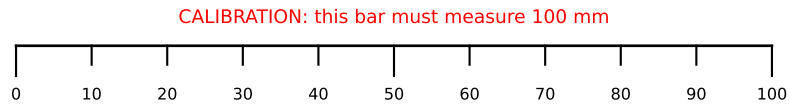

Hold the display against these circles:

- its round body should match Ø58
- its front bezel should match Ø79

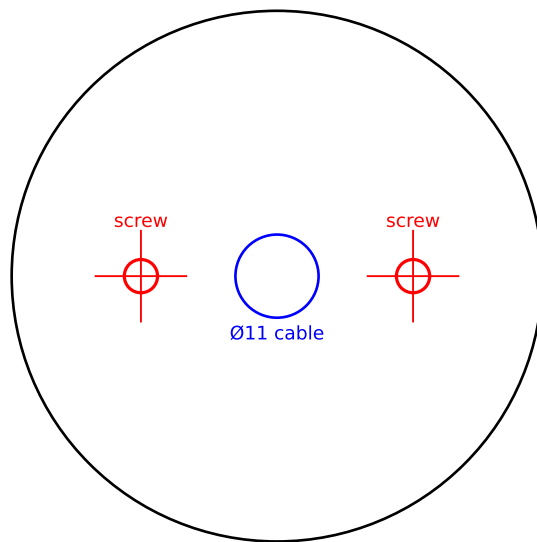

If they differ, tell me the measured sizes and I will rescale.

Page 2 — Display Screw-Hole Template

Cut/punch the 3 red holes, center the dotted Ø58 on the display body,
and check the holes land on the unit's rear screw holes.
Misaligned? Photograph the back with a ruler and send it over.

Page 3 — Wall-Plate Drill Template

Tape to the wall, level the two red screw marks, punch/drill them and the center cable hole. (Screws sit inside the bayonet ring.)
